

Amendments to the Specification:

Please replace the paragraph on page 53, lines 2-10, with the following rewritten paragraph:

--In the acceleration sensor 310, the first piezoelectric element 313a has a third electrode 314c provided on the ~~second~~ first surface of the first piezoelectric element 313a, and second piezoelectric element 313b has a fourth electrode 314d provided on the ~~second~~ first surface of the second piezoelectric element 313. The fixed case member 311 and the oscillation place 312 are each made of an electroconductive material to ensure that the third electrode 314c of the first piezoelectric element 313a and the fourth electrode 314d of the second piezoelectric element 313b are electrically connected with the oscillation plate 312 and the fixed case member 311, thereby enabling the fixed case member 311 to serve as a ground.--
